EXPERIENCE

I have over 10 years of experience working with various web and mobile development technologies. My focus is on web development with PHP & MySQL on the back end and javascript with React on the front end.

Web Developer / Student — Freelance — 12/18 to Present

I left my previous job to return to my preferred career as a web developer and pursue a B.S in C.S. Continuing to work with PHP, I also picked up React, caught up with current web standards, and put together a new portfolio. Recent projects include a real-estate search site, using APIs from Leaflet and openCageData, and a javascript implementation of tetris.

Customer service / Sales — various — 2015 to 2018

After D.E.S. was shut down I found myself working various other jobs while still doing web and game development as a hobby.

Web Developer / Regional Manager — D.E.S. — 2013 to 2015

I first built the company website and online store using PHP, MySQL, and bootstrap. I then developed a new scheduling / inventory software with actionscript on the Adobe AIR platform that integrated with the admin backend of the site. I was then moved to a pure management position.

Web Developer — Freelance — 2009 to 2013

I mostly worked as a contractor for a local design company (R squared), building the functionality for the sites they designed. I also did other independent freelance work as well. My focus was on PHP, MySql, javascript, and actionscript. Projects included: a PHP & MySQL server to compile reports for a concrete aggregate testing facility, an Android app that integrated with a wholesale warehouse's ordering system for in the field order entry, and various small business websites.

Skills

PHP / MySql

Javascript (React & vanilla)

Bootstrap

HTML / CSS / SaSS

Git

Graphic Design & Photo-Editing
(Adobe CC)

Copywriting

Communication & Teamwork
